Usage Hints

This study guide summarizes a lot of information. Considering that it contains useful hints and tips to additional sources on our TU website. On www.tu-berlin.de a lot of pages can be found using the "quick access": Filling the field on the right side of the TU website with the correct number you are directed to the correspondent web page.
Dear Students!

This Master’s program will prepare you for an international career in computer sciences. Besides providing you with the necessary language skills, we aim to give you a more specified knowledge. With TU Berlin you have opted for a top-ranking and forward-thinking university and courses that will help you specialize and prepare for a future-oriented market.

Today, professional and scientific specialization is an important asset and very much needed when planning an international career. Building on your Bachelor’s degree we offer you further specialization in computer sciences. You need to decide early on where your interests lie and in which professional fields you plan to specialize in order to benefit from this Master’s course. Once you’ve decided on your specialization you should write your Master’s thesis in this specific field of study.

Our Master’s program attracts students from around the world. Prior preparation and qualifications vary in standards and contents. If you feel you lack some of the skills required for this Master’s program, please don’t hesitate to consult your lecturers. They will advise you where to focus your efforts. We expect you to be prepared to adapt to a highly self-reliant and self-responsible learning environment.

The following study guide will provide you with information on which modules you’ll have to complete and which exams you’ll have to take, but it also informs you on your choices. The details are laid out in the study and examination regulations. Basic regulations concerning studies and examination organization may be found in the Regulations Governing General Study and Examination Procedures (AllgStuPO) of Technische Universität Berlin. Relevant information regarding academics and teaching is published on the Faculty’s website. Please check the websites regularly and make sure we can reach you via your TU Berlin email address.

We recommend that you organize your study schedule as efficiently as possible and to take examinations early. We also recommend you to consider taking part in one of our international student exchange programs or to sign up for a dual degree with a university abroad. We will help you to choose and prepare for such an endeavor with our expertise and relevant programs.

I wish you an inspiring and successful time at our Faculty.

Prof. Dr.-Ing. Sibylle Dieckerhoff
Dean of Studies at Faculty IV
Electrical Engineering and Computer Science
Your Studies

Study Goals and Degree

This Master’s program serves to provide you with professional qualifications as well as enhance your skills for independent scientific work in the field of Computer Science and related scientific fields. Upon completion of the Master’s degree you will have gained advanced specialized knowledge and be up to date on current research topics in the field of Computer Sciences. Seminars, projects and Master’s theses will be directly integrated into running research work carried out by the chairs.

Graduates will receive the academic degree of ‘Master of Science’ (M. Sc.). This degree will prepare you to work independently or occupy leading positions in industry, administration or science. You will be able to start your own business or continue your professional education in postgraduate programs.

Organization of the Master’s Program

This four-semester Master’s program is based on a range of electives and requires you to write a final Master’s thesis. Building on skills you acquired during the Bachelor’s program, the Master’s core studies will provide you with in-depth knowledge. It will impart you with the relevant skills to manage specific professional techniques and to adopt innovative and creative problem-solving strategies as well as equip you with an understanding of current technologies in the field of computing sciences and in related scientific and professional fields.

Therefore the modules are assigned to specific study areas (see an overview at 184947). A study area accumulates modules of different chairs under a specific focus. The organization of the program into study areas allows you to choose your modules with thematic focal points that will feed directly into your individual study profiles. The study and examination regulations define which rules are applicable for choosing the study areas.

Compulsory Electives

The compulsory electives are comprised of a total worth of 60–66 CP. You may choose modules worth 30–42 CP from one of the following study areas:

- Data and Software Engineering
- Embedded Systems and Computer Architectures
- Foundations of Computing
- Cognitive Systems
- Digital Media and Human-Computer Interaction
- Distributed Systems and Networks

For the additional compulsory electives, modules worth 18–36 CP, you may choose from
other listed study areas. For the catalogs and module overviews, please check 168536. As electives you have to complete modules worth 24–30 CP with thematic focus on both technical skills and general skills. You may choose modules from all courses offered by the TU Berlin or other universities in Berlin and Brandenburg as well as from courses offered by equivalent foreign universities and institutions of higher education.

**Recommended Progress of Study**

The table below shows the course of study as recommended in the Study and Examination Regulations. The described course of study gives you an example and provides for a general guideline on how to organize your Master’s program.

**The Mentoring Program**

Our experience has led us to the understanding that students face various challenges during the course of their studies. In order to meet your needs Faculty IV is currently in the process of developing a new mentoring program. This program will offer students guidance and support throughout the three phases of their studies: the initial phase of studies (usually semester 1–2), the orientation phase (semester 2–4), the phase of in-depth specialization (semester 5–10).

For a student-to-student-exchange you can also use the platform ISIS (www.isis-tu-berlin.de). Additional to the module-connected courses you can address more general topics within the course “Studieren an der Fakultät IV (EECS)”, short: EECS-Studium (www.isis.tu-berlin.de/course/view.php?id=672). The supplied contents are intended to help you to find your way through your studies and to give you orientation for your day to day routine at our university.

**Studying Abroad**

Today’s labor market is a competitive global arena, that asks of university graduates to not

only have proficient knowledge of foreign languages but also professional and intercultural experience. Thus you may consider during your Master’s program a longer stay abroad. Apart from supplying you with a significant advantage in regard to any future employment, a study stay in a foreign country proves often to be also a very unique personal experience. Student exchange programs, international internships or employment abroad give you not only the opportunity to enhance your specialized know-how, but also to broaden your personal views on differences in languages, cultures and everyday life. Acquired intercultural skills, flexibility and commitment demonstrated by your stay abroad are important assets for future employment.

To make the most out of your stay abroad, both professionally and personally, you need to prepare this time as thoroughly as possibly. Thus we recommend, you start with your preparation well in advance and make proficient use of our informative events and consultation.

There are many possibilities and a wide range of student exchange programs, amongst which Erasmus+, the German Academic Exchange Service (DAAD), Fulbright are the best-known, but not the only ones. Each semester the faculty holds different informative events, which are usually advertised online in advance.

For assistance and information you may contact the TU Berlin’s Students Mobility and International Students Office (5190). They offer advisory and counseling services for your stay abroad. Furthermore, the Career Service (165150) provides you with any information pertinent to internships in Germany and abroad.

Exchange Programs at Faculty IV

As part of the Erasmus+ exchange program, the Faculty currently cooperates with more than 40 universities in 15 European countries. The TU Berlin hosts students from participating universities and has been sending students abroad for years. Please see 96169 for the latest brochure and the exchange possibilities offered by the Faculty.

Apart from this specifically Europe-targeted program, the Faculty also engages in non-European exchange programs, currently with:

– Universidade Federal do Rio Grande do Sul (UFRGS) in Porto Alegre (Brazil). For further information consult 29680.
– Shanghai Jiao Tong University in China. 150631

Double-Degree Programs at Faculty IV

Undoubtedly, participating in a double-degree program is the highlight of any study abroad. By participating in a double-degree program you’ll have the opportunity to study at the TU Berlin and at a second university abroad. Upon successful completion of your studies, you will be awarded two academic degrees. For the benefit of both German and foreign students, the Faculty has entered into several double-degree agreements. Our current partners are in China, France, Korea and Poland (150631).

Information about all programs of the Faculty IV: 150321.

Please contact the Faculty IV’s International Studies Coordinator, Wolfgang Brandenburg when you plan and prepare a stay or double degree abroad (147520).
Study and Examination Regulations

Annotation

Please note that only the original German Version is legally binding! This version is an unofficial reading version. The text published in the Official Gazette of Technische Universität Berlin is the authoritative and legally binding version.

On 6 May 2015, the Faculty Council of Faculty IV – Electrical Engineering and Computer Sciences – of Technische Universität Berlin enacted the following Study and Examination Regulations, last amended on 14 December 2016, for the Master’s program in Computer Science (Informatik), in accordance with Section 18 (1) no. 1 of the University Charter of Technische Universität Berlin and Section 71 (1) no. 1 of the Act on Higher Education Institutions in the State of Berlin (Berliner Hochschulgesetz, BerlHG), as amended on 26 July 2011 (Berlin Gazette of Laws and Ordinances [GVBl.], page 378).

I. General Section

Section 1 Scope of Application

These study and examination regulations set down the objectives and organization of studies as well as the requirements for and execution of examinations in the Master’s program in Computer Science at Faculty IV – Electrical Engineering and Computer Science. They supplement the Regulations Governing General Study and Examination Procedures (AllgStuPO) of Technische Universität Berlin by course-specific regulations.

Section 2 Entry Into Force/Expiry

1) These regulations shall come into force on the day after their publication in the Official Gazette of Technische Universität Berlin (Amtliches Mitteilungblatt – AMBl.).

2) The present regulations supersede nine semesters, from the date of their enforcement on, the study regulations for the Master’s program Informatik of 10 March 2010 (AMBI. TU 18/2011, p. 293) in the version of 6 February 2013 (AMBI. TU 5/2013, p. 50) and the examination regulations for the Master’s program Informatik of 10 March 2010 (AMBI. TU 18/2011, p. 298). Students who have not completed their Master’s program in accordance with the regulations sentence (1), upon this amendment, shall be automatically subject to the present regulations. The examination board decides upon the accreditation of their previous academic performance.

3) The present regulations apply to all students who enroll in the Master’s program Computer Science (Informatik) at Technische Universität Berlin after the enactment of the present study and examinations regulations. Students who enrolled for the Master’s Program Informatik of Technische Universität Berlin before the present
regulations were enacted may decide within the set time limit (see section (2)) according to which of the two regulations they wish to continue their courses. This decision is binding and irrevocable and has to be registered with the relevant central body.

II. Objectives and Organization of Studies

Section 3 Qualification Objectives, Course Contents and Professional Fields of Activity

(1) This Master’s program will provide graduates with knowledge of subject-specific methods and approaches pertinent to the field of computer science. Graduates will learn to apply these tools and be competent to assess their viability for specific application scenarios. Graduates will be widely acquainted with core competencies in computer science, such as analysis, abstraction and formal description of relevant problems, and they will be skilled in finding hardware and software solutions and applying them accordingly. Graduates will gain in-depth knowledge of specific aspects of computer science. On the basis of their specialized knowledge, they will be able to evolve existing methods on their own account. Graduates will acquire the ability to analyze and find targeted solutions for complex technical and scientific problems in the field of Information and Communication Technology. They will be able to independently understand and structure specific technical and scientific subject matters and display these in appropriate written and oral forms. Graduates will obtain the ability to reflect scientific knowledge critically. They will be capable of acting responsibly within their scientific environment and society and stay considerate of ethical standards. They will be skilled in cooperating in intercultural contexts and have highly developed social and communication skills in order to occupy outstanding positions within multidisciplinary teams.

(2) Important elements of this Master’s program are the analysis of shortcomings and the search for equivalent computer-based response strategies. This includes the development of algorithms and programs in distributed systems, networks and embedded systems, the analysis and manipulation of extremely large quantities of data as well as the modulation of fundamental aspects of computing systems. This also includes the understanding of the interconnection between computer science and other fields – for example, human-computer interaction – and their interdisciplinary aspects. All subjects of this Master’s program shall enhance the graduate’s analytical and creative skills as these are highly sought after in any professional and scientific work and in a society that is increasingly linked by technology. In order to facilitate skills and competence beyond specialization in computer science, this Master’s program aims to provide students with the opportunity to work and conduct their research largely in small working groups. Projects shall offer the opportunity not only to train the students’ practical skills but also their proficiency at organizing teamwork on their own. Seminars shall
help to enhance the students’ presentation skills and their capability to work through the subject matter and problem areas independently and provide them with the opportunity to present and to discuss their own solutions. The Master’s thesis shall, in addition, enhance the students’ ability to plan and organize a specific and complex research project.

(3) There is no valid general job description for a computer scientist. Employment varies depending on industries, enterprises, and working environments, and often asks for very specific know-how. Yet, the core competencies of any computer scientist have proven to be the ability to develop specific performance solutions and to come up with increasingly specialized and innovative problem-solving concepts. This Master’s program aims, therefore, to upgrade your basic skills as a computer scientist and to provide you with the essential specialization in the field of computer science; with this Master’s program, you may seek employment internationally, start up your own enterprise, or even pursue a career in research.

Section 4 Course Start, Standard Period of Study and Required Coursework

(1) The course may be started in the winter or summer semester.

(2) The standard time-to-degree, including the writing of the Master’s thesis, shall be four semesters.

(3) The required coursework in the Master’s program amounts to 120 CP.

(4) The educational program and the entire examination procedure are designed and organized in such a way that the program may be completed within the standard time-to-degree. Section 4a Admission Requirements

Section 5 Organization of Studies

(1) Students have the right to plan the progress of their own course of study as long as it complies with the provisions of these Regulations Governing Study and Examination Procedures. This does not apply to obligations arising from the definition of subject-specific admission requirements for modules. Though students may organize their progress by themselves, we attached for your consideration a good example for a study schedule (Annex (2)).

(2) Students are to render an academic performance that attains a total amount worth of 120 CP, comprising 90 CP in modules and 30 CP in the Master’s thesis.

(3) The compulsory electives are comprised of a total worth of 60 to 66 CP. You may choose modules worth 30 to 42 CP from one of the following study areas:

– Data and Software Engineering
– Embedded Systems and Computer Architectures
– Foundations of Computing
– Cognitive Systems
– Digital Media and Human Computer Interaction
– Distributed Systems and Networks
Modules for these study areas are listed in the respective module list.

For the additional compulsory electives, modules worth 18 to 36 CP that are to be completed, you may choose from the other listed study areas, respectively from the study area Information Systems.

(4) Students are obliged to participate in one project worth at least 9 CP and a seminar from the compulsory electives area.

(5) Students may choose elective modules worth 24 to 30 CP from the entire range of subjects of TU Berlin, other universities and equivalent institutions of higher education within the scope of application of the Berlin State Higher Act, as well as institutions of higher education and universities abroad that have been accredited as equivalent. These modules shall serve for the acquisition of additional specialized and interdisciplinary skills. Students are recommended to choose from modules that factor societal, social and/or gender and diversity aspects. We also recommend modules that qualify for entry to a profession, such as modules from the fields of Electronic Engineering or Mathematics. The electives may also include modules facilitating skills in English or other foreign languages. English modules from level C1 (GER, according to CEFR) on will be credited.

(6) Students are recommended to study abroad. During their studies abroad they shall engage in graded studies and exams. Achievements during this time may be recognized upon request if they are equivalent to the modules laid out by the Study and Examinations Regulations of TU Berlin and if they complement the Master’s programs modules. The examination board decides on specific requirements. We advise you to organize your study schedule and examinations abroad accordingly. To make sure that your achievements are eligible for accreditation at TU Berlin, we advise you to present your study schedule and all planned achievements well ahead of your departure to your module supervisor or even the examination board. The faculty offers important advice and support throughout your planning phase and your stay abroad. You may consult your module supervisor, the General Student Counseling, the International Studies Coordinator, the Academic Coordinator or the examination board. The TU Berlin and the Faculty IV hold agreements and joint programs with several international universities and higher education institutions. Please keep yourself informed. There may be particular requirements for your study stay with these partner institutions.

Upon return, you will have to present your achievements to the examination board if you wish to obtain accreditation of the credits gained during your stay abroad. We advise you to schedule your stay abroad for your second or third semester as these two semesters are, according to our experience, the most favorable times for studying abroad during your Master’s program.
III. Requirements and Conduct of Examinations

Section 6 Purpose of the Master’s Examination
The Master’s examination serves the purpose of assessing whether a candidate has reached the qualification objectives as laid out in Section 3 of these regulations.

Section 7 Master’s Degree
Upon successful completion of the Master’s examination, Faculty IV – Electrical Engineering and Computer Science – awards to the graduate the academic degree ‘Master of Science’ (M.Sc.) on behalf of TU Berlin.

Section 8 Scope of the Master’s Examination, Determination of the Overall Grade
(1) The Master’s examination consists of the module examinations as specified in the module list and the Master’s thesis according to Section 9.

(2) In accordance with Section 47 of the Regulations Governing General Study and Examination Procedures (AllgStuPO), the final grade is assessed on the basis of all graded and applicable module examinations as they are stated in the module list and the Master’s thesis. The maximum amount of all modules that shall not be counted into the final grade, must not exceed 30 CP and shall include electives worth 12 CP. Subject to the final choice of all modules that are credited for the final grade shall be generally those modules with the lowest credits. In the case of two equivalent modules, the regulations foresee that the most recent module shall be disregarded. All not graded modules or those that are marked ‘ungraded’ shall primarily be included in the final grade. The Master’s thesis is weighted with 1 and determines the final grade.

Section 9 Master’s Thesis
(1) The Master’s thesis shall generally be written in the fourth semester. The Master’s thesis amounts to 30 CP and is to be produced within 26 weeks. Upon the candidate’s submission of a duly substantiated request, the examination board may extend the deadline for completion of the Master’s thesis by one month and in the case of illness up to three months. Any other requests for exemption are to be reviewed and decided upon by the examination board.

(2) The topic of the Master’s thesis may be rejected once, however only within the first six weeks of being issued by the relevant department of the Central University Administration.

(3) The procedure of application for admission to a final thesis and the latter’s assessment is regulated by the Regulations Governing General Study and Examination Procedures (AllgStuPO), in force at the time of application.

(4) The Master’s thesis must not obtain a non-disclosure statement or any other secrecy arrangement that goes beyond the standard confidentiality and due diligence obligations.
Section 10 Types of Examination and Enrollment for Examinations

(1) Types of examination and the procedure of enrollment for module examinations are regulated by the Regulations Governing General Study and Examination Procedures (AllgStuPO), in force at the date of application.

(2) Compulsory elective modules or elective modules from other faculties are subject to the examination regulations as laid out in the module descriptions.

For the Regulations Governing General Study and Examination Procedures (AllgStuPO) at TU Berlin see ➤ 75846.
Overview

To ease your first steps in our Master’s program we strived to compile a list of addresses of the most important contacts at Faculty IV and TU Berlin, including their online links.
